KRISHIT MEHTA

Data Scientist | Data Analyst | Machine Learning
London, UK | krishitajbani@gmail.com | +44 7810 481592 | linkedin.com/in/krishitmehta | github.com/krishitmehta

PROFESSIONAL SUMMARY

MSc Data Science candidate (University of Greenwich, completing January 2027) with a BTech in Computer Engineering (GPA 3.6/4.0) and hands-on experience building machine learning and analytics solutions, from computer vision to uplift modelling and forecasting. Strong Python and SQL, with a track record of turning analysis into measurable outcomes, including a retention model delivering 3.8x ROI. Currently researching how large language models can score and generate synthetic survey responses. Experienced in presenting progress to supervisors and gathering requirements directly from clients. Available to work full time in the UK from February 2027.

TECHNICAL SKILLS

Programming and Data: Python, SQL, Pandas, NumPy
Machine Learning: Classification, Regression, Clustering, Feature Engineering, Model Evaluation, Cross-Validation, Scikit-learn
Deep Learning and Computer Vision: Neural Networks, CNN, YOLOv8 (Object Detection), TensorFlow, Keras, OpenCV
Data Analysis and Visualisation: PowerBI, Streamlit, Matplotlib, Seaborn
Tools and Version Control: Git, GitHub, Scikit-learn, Jupyter Notebook, VS Code

PROFESSIONAL EXPERIENCE

Data Science Research Intern (Computer Vision) – CSRTC *Jan 2025 – May 2025*

- Designed and developed an end-to-end computer vision pipeline to classify road-traffic congestion from camera imagery, combining CNN-based image classification with YOLOv8 vehicle detection.
- Engineered image augmentation and preprocessing workflows that improved classification accuracy by 14% and validated results using accuracy, precision, recall, F1 Score and confusion matrix.
- Delivered reproducible research supporting intelligent transport systems, identifying the potential for automated monitoring to reduce reliance on manual observation.

Tech Stack: Python, TensorFlow, Keras, CNN, YOLOv8, OpenCV, Scikit-learn

Web Developer Intern - Codice Technology (Remote) *May 2024 – Jul 2024*

- Built a data-driven stock management web application to track inventory, stock levels, and sales records, improving operational visibility into inventory changes.
- Designed relational tables and wrote SQL queries (joins, aggregations) to produce stock and sales reports, and implemented validation logic that reduced manual stock-reconciliation effort, translating business requirements into features within an Agile workflow.

Tech Stack: HTML, CSS, JavaScript, MySQL, Structured Data Management, Agile

PROJECTS

Customer Churn Prediction with ROI System

- Built an uplift (X-learner CATE) model to target retention offers by incremental impact rather than churn risk, generating £190,761 net value (3.8x ROI) on a fixed £50,000 offer budget, a +21% gain over conventional churn-risk targeting (£148,601, 3.0x ROI).
- Implemented a policy simulator, deployed as an interactive Streamlit app, and a Qini evaluation framework to compare targeting strategies on true incremental revenue, demonstrating that risk-based targeting wastes spend on "lost causes" and "sleeping dogs" who don't respond to offers.

TFL Energy Demand Prediction

- Developed a forecasting pipeline on real TfL, GLA, and UK Met Office open data to predict rail network electricity using (R^2 0.93, MAPE 3.6%, ±4 GWh) two years ahead, translating predictions into estimated cost (£150/MWh) and CO_2 impact (0.207 kg/kWh) via an interactive web app.
- Engineered a reproducible data pipeline (collection feature → engineering → Ridge/Gradient Boosting modeling) using only real, openly-licensed data, despite TfL publishing energy figures only annually, validated so reconstructed periods sum back to actual published totals.

EDUCATION

MSc Data Science - University of Greenwich, London *Jan 2026 – Jan 2027*
Relevant Modules: Machine Learning, Data Visualisation, Big Data, Data Analytics

BTech Computer Engineering - Charotar University of Science & Technology, India *Oct 2021 – May 2025*
GPA: 3.6/4.0 | Relevant Modules: Mathematics, Python, Web Development, DevOps, Computer Networks

CERTIFICATION

- Github Foundation(Linkedin)
- Machine Learning(Kaggle)
- Data Visualization(Kaggle)
- AI master class
